

Getting Started with CurricuLLM

A guide for students

What is CurricuLLM?

CurricuLLM is an AI learning tool that your school uses to help you learn. You can chat with it about the things you're studying in class, and it will help you understand them better. It knows what you're learning at your year level and it's designed to work with you, not just give you answers.

How does it work?

You type a message and CurricuLLM responds. It's like having a conversation. But there's something important to know: it's not going to just give you the answer. Instead, it's going to help you think through the problem yourself.

That might feel different from other AI tools you've tried. If you ask it "what's the answer?" it will probably ask you a question back. That's on purpose — it's helping you learn, not doing the work for you.

How to log in

Go to app.curricuLLM.com and log in with your school email address. You'll go straight into chat mode where you can start a conversation.

How to get the most out of it

Write in full sentences

Instead of typing one word, explain what you're thinking. "I think it's evaporation because the water gets hot" is much better than just "evaporation."

Don't be afraid to be wrong

Getting things wrong is part of learning. CurricuLLM won't judge you. If you give a wrong answer, it will help you figure out where you went wrong.

Ask questions back

Keep the conversation going

If you don't understand something, ask it to explain. You can say "I don't get that" or "Can you explain it a different way?"

Don't stop after one message. The best learning happens when you go back and forth a few times. Try to have at least five or six exchanges.

What if...

"It won't give me the answer!"

That's how it's supposed to work. It's helping you figure it out yourself. Keep going with the conversation — you'll get there.

"I'm stuck and don't know what to type"

Just tell it that! Type "I'm stuck" or "I don't know where to start." CurricuLLM will give you a hint or break the question into smaller steps.

"I think it said something wrong"

That's possible — no AI is perfect. If something doesn't seem right, tell your teacher. Questioning what AI tells you is a really important skill.

"Something isn't working"

Let your teacher know. They can help you or get in touch with the CurricuLLM team to sort it out.

Remember: CurricuLLM is here to help you learn, not to do your work for you. The more effort you put into your conversations, the more you'll get out of it. Think of it like a really patient tutor who always has time for your questions.

You can use it in class and at home whenever you need help with what you're learning.
