

Teacher Quickstart

Everything you need to get started in 10 minutes

What is CurricuLLM?

CurricuLLM is an AI learning platform built around the Australian and New Zealand curricula. It works like a personalised tutor for each student — guiding them through curriculum-aligned learning conversations rather than just giving them answers. You can see what your students are working on, where they get stuck, and how they're progressing.

Getting set up

1

Log in

Go to app.curriculum.com and log in with your school email address.

2

Complete onboarding

You'll be asked a few onboarding questions to select your classes and year levels. This only takes a minute.

3

Start chatting

You'll land straight into chat mode. This is where you and your students will have learning conversations with CurricuLLM.

Three things to try in your first 10 minutes

1

Plan a lesson activity

Ask CurricuLLM to help you plan an activity for an upcoming lesson. Notice how tightly it integrates with your curriculum — the content descriptors, the language, and the progression are all built in. This isn't generic AI output.

2

Try Studio Mode

Upload an existing lesson plan and use Studio Mode to generate new resources from it — worksheets, discussion prompts, extension activities, or differentiated versions for different ability levels. It's a fast way to see how CurricuLLM can save you preparation time.

3

Emulate a student conversation

Switch to student mode and have a conversation as if you were one of your students. Try giving a wrong answer, being vague, or going off-topic. Watch how CurricuLLM guides rather than tells — this is the experience your students will have.

How is this different from ChatGPT?

General AI tools	CurricuLLM
Give answers on request	Guides students to find answers themselves
Generic content from anywhere	Aligned to the Australian and NZ curricula
~41% accuracy on ANZ curriculum	89% accuracy on ANZ curriculum
No teacher visibility	Analytics showing student issues, achievements, and class-level progression
No safety layer for schools	Built-in safety monitoring and guardrails
